

## **Leesburg Concrete is Now a Licensed Manufacturer of the SlenderWall® Building System**

*New Manufacturing Facility Near Orlando is Ramping Up for Production*

Leesburg, FL, June 2, 2010 -- Leesburg Concrete, a leading manufacturer of precast concrete steps, ramps, and decking, as well as metal guardrails and handrails, is pleased to announce that they have just entered a licensing agreement with Easi-Set® Industries to manufacture SlenderWall®.

SlenderWall is a lightweight, architectural precast concrete/steel-stud building-panel wall system that is used for new construction, re-cladding, and renovation of large, multi-story commercial buildings. Leesburg Concrete chose to partner with Easi-Set Industries, the developer of SlenderWall® because they feel the product offers a complete system utilizing proven production techniques, materials and technologies.

“SlenderWall is a good fit for our production facilities,” stated Kirk Rouse, Vice President of Leesburg Concrete. “We recently built a new 18,000 square-foot, state of the art manufacturing facility that positions us to step up production, and the SlenderWall system is a good fit with our current product line and production capabilities. In addition, it gives us the opportunity to provide our customers with environmentally friendly, green building options.”

SlenderWall meets many criteria for green building strategies and can potentially contribute up to 14 LEED credits based on optimized energy performance, use of recycled content, construction waste management, durability, and life cycle CO2 reduction.

Leesburg Concrete is interested in meeting the needs of commercial building construction and renovation projects. Our representatives are available to meet with you to discuss all project requirements.
